

ONLINE SHOPPING SYSTEM

The online shopping system is an endeavor aimed at producing an easy-to-use shopping system, one that streamlines all aspects of purchasing, both with respect to the seller and buyer, like transactional, logistical, etc.

- The user login can be used to login either as a user or an admin.
- The user can place orders on the system, upon browsing products of various categories.
- The user can view the status of their orders, as well as correspond with the delivery agency.
- The user can use the very system to make payments of various modes, including by card and upi.
- The admin can view inventory status in each category as well as details of orders in transit.
- The admin can raise exceptions regarding inventory.
