RAILWAY RESERVATION SYSTEM

The railway reservation system offers a digitized solution to the otherwise cumbersome procedure of booking a ticket within the railways system.

- The user logs in as either a regular user or an administrator with their respective credentials.
- The user may browse the different trains arriving at a given station which will arrive at a particular station, and make reservations in them.
- The user may choose from the various bogeys in the train and make a payment towards the reservation.
- The administrator verifies authenticity of transactions and oversees smooth passage of operations.
- The user is given a computer-generated ticket for use during boarding.
